Training plan

ARTIFICIAL INTELLIGENCE

Training Plan 2026/2026

uphold

CONTEXT
WHY?

The management at **Uphold, Lda.** has decided to invest in the development of **Artificial Intelligence (AI)** skills for their support teams (Customer Service, Accounting and People Team).

SKOLAE Formação has always offered specific learning solutions in its portfolio for the development of skills in **digital productivity, process optimisation and strategic decision-making** that can foster better **operational performance and administrative efficiency** within teams.

Proper **AI upskilling** in organisations has a direct impact on the organisational climate, productivity and, consequently, the business.

We contextualise that addressing **Generative Artificial Intelligence in the daily routine of these critical areas** means integrating topics as fundamental as **advanced Prompt Engineering with Claude and ChatGPT, customer service process automation, intelligent analysis and reporting of financial data, and the optimisation of Human Resources routines.**

We recommend a maximum of 12 delegates per group to maintain a genuine ***action learning*** environment. This proposal is designed for:

12
Delegates

Personnel from diverse functional areas across the organization

Onsite or Live training

PURPOSE

To equip professionals in support areas (Customer Service, Accounting and Human Resources) with generative Artificial Intelligence skills, enabling them to optimise customer service, automate bureaucratic tasks and analyse complex data for daily decision-making.

The following sections outline our proposal, detailing the operational process, methodology, indicative frameworks, projected timelines, and the strategic objectives underpinning this intervention

KEEP IN MIND

A company's greatest asset lies within the competencies of its workforce, which are increasingly expected to catalyze *lifelong learning*

INTERVENTION PROCESS

Our approach is structured around 3 stages:

PREPARING

- Immerse in the organisation's culture
- Understand the delegate profile
- Define specific objectives, expectations and development needs
- Tailor the learning journey accordingly

TRAINING

- Deliver a bespoke programme, face-to-face/Onsite or virtual (Zoom or Teams)
- Deploy specialist SKOLAE facilitators with corporate training expertise

EVALUATING

- Delegate satisfaction and reaction assessment
- Learning observation and evaluation
- Post-programme report and debrief

PREPARING

Getting it right from the start

STAGE 1

Stage goals

- Gather insights on delegate roles and their current challenges in relation to the programme themes
- Understand the organisation's background, previous development activity and current challenges
- Identify specific objectives, expectations and individual development needs
- Design or select the relevant challenges, dynamics, role plays, exercises and case studies
- Fine-tune all programme content

Activities

- Conversations with key stakeholders and/or members of the teams involved in this project
- Review and analysis of the organisation and delegate profile information gathered

Skolae FORMAÇÃO

TRAINING

A meaningful learning experience

STAGE 2

Our programme is built around three phases of learning:

A **discovery phase:** challenging delegates through **PRE-WORK** activities and independent learning

A **training phase:** grounded in a structured **LEARNING JOURNEY** delivered through action learning

A **consolidation phase:** embedding change through follow-up activities that reinforce earlier learning

Our approach engages participants before the formal training begins. Utilizing a **flipped-learning framework,** this asynchronous phase prompts individuals to review materials and collect foundational data for upcoming workshop sessions, while self-assessing key behavioral optimization opportunities.

Skolae FORMAÇÃO

STAGE 2

TRAINING

FOSTERING ACTIVE ENGAGEMENT

RECOMMENDED INITIATIVES

BRIDGING THEORY AND PRACTICE:

participants are invited to critique a relevant case study, infographic, article, publication, podcast, or video aligned with the training theme.

PRE-PROGRAMME EXPECTATION SURVEY:

An online questionnaire designed to evaluate participant expectations and diagnose current pain points. This step serves to capture additional context, directly informing the tailoring of the program.

Our approach engages participants before the formal training begins. Utilizing a **flipped-learning framework,** this asynchronous phase prompts individuals to review materials and collect foundational data for upcoming workshop sessions, while self-assessing key behavioral optimization opportunities.

Skolae FORMAÇÃO

STAGE 2

TRAINING

FOSTERING ACTIVE ENGAGEMENT

UPHOLD Department	SKOLAE Course	Duração
People	Ai Applied To Hr	7h
Costumer Service	Reinventing The Customer Experience With Ai	7h
Accounting / Trading & Risk	Ai Mastery For Finance	7h
Engeneering	Artificial Intelligence For IT Specialists: Techniques, Use Cases And Innovations	7h
Product Management	Product AI	7h
Quality Assurance (QA)	Ai-powered Software Testing: Fundamentals And Best Practices	14h
Compliance	Compliance And Governance Of Artificial Intelligence	7h
Marketing	AI For Content Creation In Marketing	7h
Infosec	Security Of AI In Production	7h

Skolae FORMAÇÃO

TRAINING

Driving Engagement via Experiential Learning

STAGE 2

Our approach delivers an engaging learning journey utilizing diverse methodologies. Key examples include:

ROLE-PLAYING & SIMULATION
(Scenarios, role-playing, and communication training across diverse professional contexts)

DESIGN THINKING TOOL
(Solving challenges using frameworks that integrate empathy, communication, and strategic creativity)

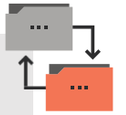

LEAN THINKING
(Lean tools and practices focused on value delive process mapping, and workflow visualization)

LP - NEUROLINGUISTIC PROGRAMMING
(Understanding communication patterns, calibrating behaviors, and maximizing interpersonal alignment)

FEEDBACK & CONSOLIDATION
(Feedback training exercises, synthesis of key takeaways, actionable best practices, and targeted debriefs)

CASE STUDIES
(Leveraging business cases from leading domestic and global organizations renowned for their strategic excellence in management, leadership, and performance)

GROW: Goals + Reality + Options + What, When Who
(Utilizing the GROW framework to foster self-awareness, personal reflection, and action-oriented coaching)

AGILE METHODOLOGY
(Adopting an Agile mindset and methodology to drive iterative planning and cross-functional collaboration)

Scenario-based learning; role plays; practical exercises on leadership skills

Real-world examples, case studies and illustrative videos

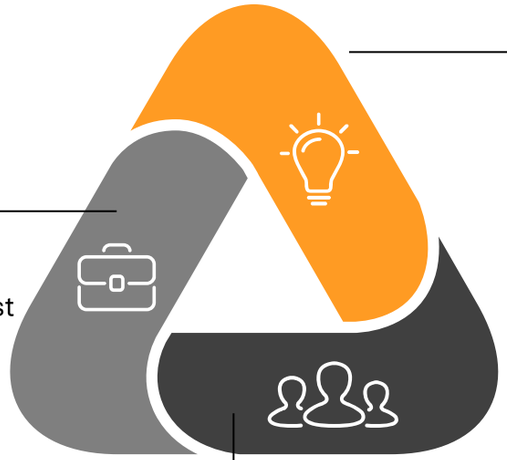

Concept framing and clarification

Feedback; synthesis moments; debriefs

ETAPA 2

TRAINING
AI APPLIED TO HR

Integrate Artificial Intelligence into your HR processes

Skills to develop:

- Increase productivity with the integration of Apps into the most relevant HR activities.

Methodology

The training has an essentially demonstrative and practical component, challenging participants to access Apps, understand their purposes and functionalities, and compare them to make the best use of them in a professional context.

Target audience

HR and Training department staff.

Duration

7 hours

Sessions can take place over 1 full day or 2 half-days

OUTLINE

SPECIFIC OBJECTIVES

- Understand how AI can support the entire employee lifecycle, from onboarding to offboarding.
- Explore the role of HR in mobilising digital literacy and an AI mindset.
- Discover practical and accessible possibilities for using AI in daily routines: data analysis, content creation, presentations, decision-making.
- Learn to maximise the returns of LLMs (language models) through effective prompts and best practices.
- Apply AI ethically and in compliance with the AI Act.

ETAPA 2

TRAINING

AI APPLIED TO HR

Integrate Artificial Intelligence into your HR processes

THE STRATEGIC ROLE OF HR IN THE DIGITAL TRANSITION WITH AI

- Digital literacy as a key competency for HR.
- Leading the AI mindset in the organisation: from salaries to culture.
- How to narrate this transition clearly and inspiringly.

AI AT THE SERVICE OF ALL HR AREAS: APPLICABLE EXAMPLES

- Recruitment and payroll (brief overview).
- Training: building adaptive plans with AI.
- Offboarding: collecting feedback and mobility planning.

SECTION 3: AI TOOLS IN DAILY ROUTINES - WHAT IS POSSIBLE TODAY

- How to transform documents into information maps: structured extraction from reports, PDFs or free-form inputs.
- How to ask good questions to AI (effective prompts to extract maximum value).
- Creating videos, presentations, images and sound with AI for training, internal communication or employer branding.
- Data interpretation with AI for decision support – transforming feedback, forms or Excel spreadsheets into clear insights, summaries and practical suggestions for HR, without creating technical dashboards.
- Practical exercise: create an AI presentation based on a real document from the organisation.

Scenario-based learning; role plays; practical exercises on leadership skills

Real-world examples, case studies and illustrative videos

Concept framing and clarification

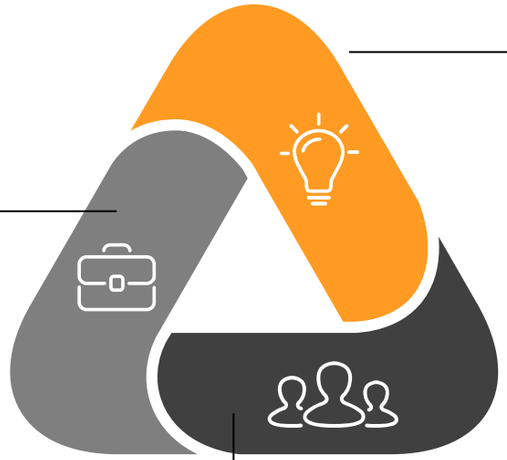

Feedback; synthesis moments; debriefs

ETAPA 2

TRAINING

REINVENTING THE CUSTOMER EXPERIENCE WITH AI

Understand and identify the potential of AI to improve the customer experience.

Skills to develop:

- Artificial Intelligence tools
- AI strategies and tactics

Methodology

Predominantly active and participatory, with the emphasis on peer exchange, shared good practice and skills rehearsal. The programme uses sensory stimulation dynamics, case studies and role-play throughout.

Target audience

This training is aimed at anyone responsible for customer management and commercial activities.

Duration

7 hours

Sessions can take place over 1 full day or 2 half-days

OUTLINE

GENERAL OBJECTIVE

Acquire skills to create a unique and personalised experience for your customers, automate repetitive tasks and develop long-lasting relationships using generative Artificial Intelligence tools.

SPECIFIC OBJECTIVES

- Characterise AI tools for customer insight and personalisation.
- Create an AI strategy for automation and retention

ETAPA 2

TRAINING

REINVENTING THE CUSTOMER EXPERIENCE WITH AI

Understand and identify the potential of AI to improve the customer experience.

INTRODUCTION TO AI

- Definition, history and applications of AI in the world of customer experience.
- The different types of AI and key technologies.
- Analyse the benefits and limitations of AI for the customer experience.
- Identification of relevant tools.
- Ethics and security: the essentials to know.

AI FOR PERSONALISATION AND IMPROVING THE CUSTOMER EXPERIENCE

- Analyse the customer data at your disposal to feed your AI (customer listening).
- Create relevant customer segments with AI and predictive analytics.
- Mapping existing customer journeys and defining potential optimisations using generative AI.
- Identify personalisation techniques.
- Personalise your interactions, customer experiences, content and offers.
- Practical exercise: identify and create your personas using AI.

IMPROVING CUSTOMER ENGAGEMENT AND SERVICE USING AI

- Customer satisfaction evaluation in a content improvement process.
- Identify routine tasks to automate and increase customer service availability.
- Integrate self-service tools (chatbot, virtual assistants, FAQs, IVR) and automation to speed up response and processing times.
- Chatbots and virtual service: conception, design and development of your first assistant.
- Improve the quality of responses (script + customer data): increase conversations with your customers.
- Conversation analysis and email dispatch using AI: sentiment analysis, keyword grouping and actionable synthesis of a large dataset.
- Maintaining the role of humans, while combining strengths between AI and humans to implement better customer service.
- Practical exercise: creating your first chatbot.

Scenario-based learning; role plays; practical exercises on leadership skills

Real-world examples, case studies and illustrative videos

Concept framing and clarification

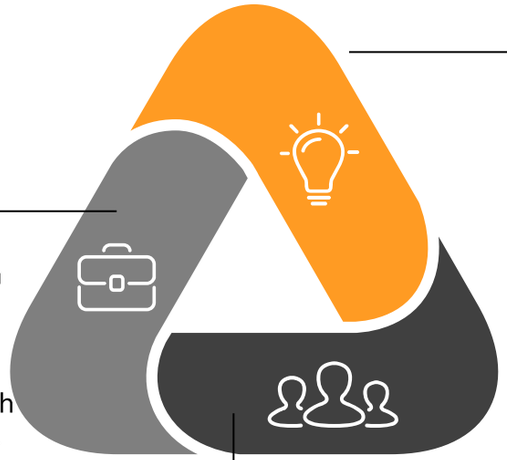

Feedback; synthesis moments; debriefs

ETAPA 2

TRAINING

AI MASTERY FOR FINANCE

Integrate Artificial Intelligence into your financial processes.

Skills to develop:

- Master the strategic use of AI in financial contexts.
- Apply prompting techniques to automate and optimise tasks.
- Transform data into insights with greater accuracy and efficiency.

Methodology

Learning-by-doing approach; initial self-diagnosis; micro-demonstrations; guided prompting practice; finance-context exercises and case studies; creation of a mini use case per participant; peer-to-peer sharing and best practice session for safe daily integration.

Target audience

Finance and related professionals: CFO/Finance Managers, FP&A, Controlling, Accounting/AP/AR, Treasury, Reporting, Internal Audit, Risk & Compliance, and team managers responsible for financial processes.

Duration

7 hours

Sessions can take place over 1 full day or 2 half-days

OUTLINE

ETAPA 2

TRAINING

AI MASTERY FOR FINANCE

Integrate Artificial Intelligence into your financial processes.

SPECIFIC OBJECTIVES

- Understand the fundamentals of Artificial Intelligence and its application to the financial sector;
- Identify opportunities and risks associated with the adoption of AI in financial functions;
- Explore case studies demonstrating how to transform key tasks using AI.

FUNDAMENTALS AND POTENTIAL OF AI IN THE FINANCIAL SECTOR

- Self-diagnosis: self-assessment questionnaire on key AI concepts applied to the financial area;
- Definition and general overview of AI;
- Mapping of existing tools;
- Justification of the relevance of AI in finance;
- Advantages and limitations of AI;
- Management of confidentiality and data security in the use of AI.

FIRST STEPS WITH COPILOT AND PROMPTING TECHNIQUES

- Familiarisation with the COPILOT interface;
- Introduction to best practices in prompting;
- What defines an effective prompt;
- Structuring and refining questions to obtain precise results

CONCRETE USE CASES OF AI IN FINANCE

Practical applications of AI in the financial sector:

- Communication and preparation of financial reports;
- Support for finance teams;
- Financial analysis and strategy;
- Automation of repetitive tasks.

Scenario-based learning; role plays; practical exercises on leadership skills

Real-world examples, case studies and illustrative videos

Concept framing and clarification

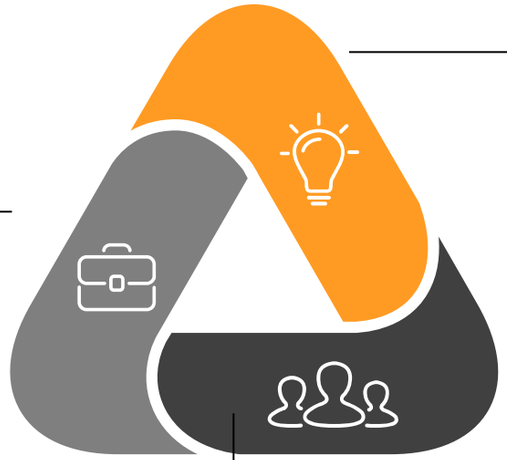

Feedback; synthesis moments; debriefs

ETAPA 2

TRAINING

ARTIFICIAL INTELLIGENCE FOR IT SPECIALISTS

Integrate Artificial Intelligence into your software development and IT processes

Skills to develop:

- Optimise code development, refactoring and unit testing using AI-powered tools.
- Implement Retrieval-Augmented Generation (RAG) architectures to query business data.
- Connect LLMs to local resources and databases using the Model Context Protocol (MCP).

Methodology

A highly practical and interactive hands-on training, combining conceptual frameworks with real-time coding labs, prompt engineering for developers and agent integration

Target audience

Software Engineers, DevOps Specialists, QA Engineers and IT Professionals.

Duration

7 hours

Sessions can take place over 1 full day or 2 half-days

OUTLINE

SPECIFIC OBJECTIVES

- Understand the architecture of Large Language Models (LLMs) and local vs. cloud deployment.
- Apply advanced prompt engineering for software development using tools like GitHub Copilot and Cursor.
- Design and deploy RAG solutions to leverage internal documentation.
- Build autonomous agents and implement integration via the MCP protocol.
- Ensure security, data privacy and compliance under the EU AI Act.

ETAPA 2

TRAINING

ARTIFICIAL INTELLIGENCE FOR IT SPECIALISTS

Integrate Artificial Intelligence into your software development and IT processes

AI FOUNDATIONS AND CO-PILOTING FOR DEVELOPERS

- Large Language Models (LLMs) architecture: Open Source vs. Closed Source.
- AI-powered code generation: best practices with GitHub Copilot and Cursor.
- Advanced prompting for coding: refactoring, debugging and automated unit test generation.

RAG AND DATA INTEGRATION

- Retrieval-Augmented Generation (RAG) fundamentals.
- Connecting LLMs to external data sources: LangChain and LlamaIndex.
- Vector databases, embeddings and document chunking strategies.

AGENTS AND PROTOCOL INTEGRATION

- Autonomous agents and multi-agent workflows in software development.
- Model Context Protocol (MCP) for connecting LLMs with local databases and APIs safely.
- Security, data confidentiality and compliance under the EU AI Act.
- Practical exercise: Deploying a local agentic workflow to automate code reviews and database queries using MCP.

Scenario-based learning; role plays; practical exercises on leadership skills

Real-world examples, case studies and illustrative videos

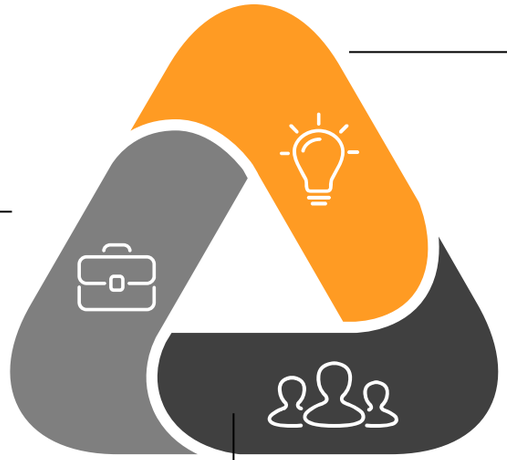

Concept framing and clarification

Feedback; synthesis moments; debriefs

ETAPA 2

TRAINING
PRODUCT AI

Accelerate product discovery, backlog management and roadmapping using Artificial Intelligence.

Skills to develop:

- Use AI for fast-paced market research, competitor analysis and user persona creation.
- Automate and optimise user story writing, acceptance criteria and backlog refinement.
- Leverage AI to analyse product metrics, customer feedback and define roadmaps

Methodology

Learning-by-doing approach; initial self-diagnosis; micro-demonstrations; guided prompting practice; finance-context exercises and case studies; creation of a mini use case per participant; peer-to-peer sharing and best practice session for safe daily integration.

Target audience

Product Managers, Product Owners, Product Designers and Agile Facilitators.

Duration

7 hours

Sessions can take place over 1 full day or 2 half-days

OUTLINE

SPECIFIC OBJECTIVES

- Apply AI tools to accelerate the product discovery phase and market mapping.
- Create and refine user personas and empathy maps using generative AI.

ETAPA 2

TRAINING

ARTIFICIAL INTELLIGENCE FOR IT SPECIALISTS

Integrate Artificial Intelligence into your software development and IT processes

AI-POWERED PRODUCT DISCOVERY AND USER RESEARCH

- Market research and competitor analysis using advanced search and prompting.
- Generating data-driven user personas and user journey maps with LLMs.
- Identifying customer pain points and opportunities from raw review datasets.

BACKLOG REFINEMENT AND USER STORY WRITING

- Prompting strategies to write clear, structured User Stories.
- AI-assisted estimation and story mapping techniques.

PRIORITISATION, ROADMAPPING AND PRODUCT ANALYTICS

- Creating and visualising product roadmaps and release plans with generative tools.
- Analysing qualitative user feedback and NPS comments to generate product insights.

Practical exercise: Conducting a mock product discovery, writing a feature backlog with user stories and creating a roadmap using Claude/ChatGPT.

Scenario-based learning; role plays; practical exercises on leadership skills

Real-world examples, case studies and illustrative videos

Concept framing and clarification

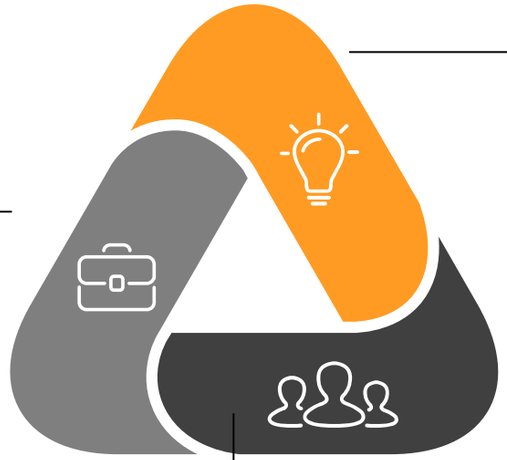

Feedback; synthesis moments; debriefs

ETAPA 2

TRAINING

AI-POWERED SOFTWARE TESTING: FUNDAMENTALS AND BEST PRACTICES

Integrate Artificial Intelligence into your Quality Assurance and software testing workflows.

Skills to develop:

- Apply Prompt Engineering to generate comprehensive test cases and acceptance criteria.
- Accelerate the creation of test automation scripts (e.g. Selenium, Playwright) using AI.
- Use AI for log analysis, bug reporting and synthetic test data generation.

Methodology

Learning-by-doing approach; initial self-diagnosis; micro-demonstrations; guided prompting practice; finance-context exercises and case studies; creation of a mini use case per participant; peer-to-peer sharing and best practice session for safe daily integration.

Target audience

QA Engineers, Software Testers, QA Managers and Developers involved in testing.

Duration

14 hours

Sessions can take place over 2 full day or 4 half-days

OUTLINE

SPECIFIC OBJECTIVES

- Understand the role of Generative AI and Machine Learning in the software testing lifecycle.
- Apply advanced prompting techniques to translate User Stories into test plans.
- Leverage AI tools to speed up script writing for automated testing frameworks.
- Analyse execution logs and error reports with the assistance of language models.
- Mitigate risks of AI hallucinations and ensure compliance with the EU AI Act in software validation

ETAPA 2

TRAINING

ARTIFICIAL INTELLIGENCE FOR IT SPECIALISTS

Integrate Artificial Intelligence into your software development and IT processes

THE ROLE OF AI IN QA & PROMPT ENGINEERING FOR TESTERS

- AI fundamentals: Machine Learning, Deep Learning and NLP applied to QA.
- Prompt design to generate functional test cases and test plans from requirements.
- Transforming User Stories into Gherkin acceptance criteria and edge-case scenarios.

INTELLIGENT AUTOMATION AND TEST EXECUTION

- Accelerating script writing for test automation (Selenium, Playwright).
- AI tools for visual testing and self-healing automation scripts (e.g. Test.ai).
- Generating realistic synthetic test data using generative models.

LOG ANALYSIS, ETHICS AND REGULATION

- Analising execution logs, stack traces and bug reports using LLMs.
- Detecting and mitigating AI hallucinations in test results.
- Impact of the EU AI Act and GDPR on QA processes and data handling.

Practical exercise: Generating a complete test plan from a User Story, writing automation scripts and executing analysis on error logs using AI.

Scenario-based learning; role plays; practical exercises on leadership skills

Real-world examples, case studies and illustrative videos

Concept framing and clarification

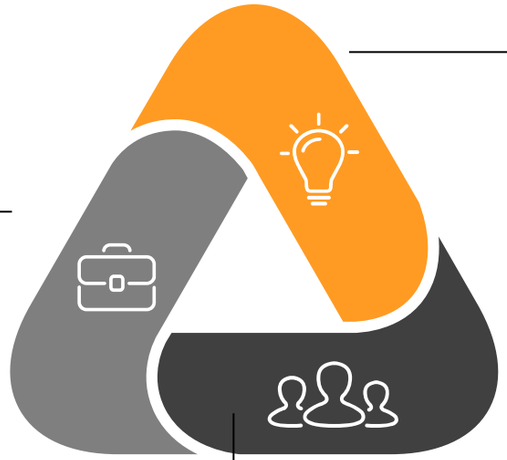

Feedback; synthesis moments; debriefs

ETAPA 2

TRAINING

COMPLIANCE AND GOVERNANCE OF ARTIFICIAL INTELLIGENCE

Transform AI Act and GDPR legal requirements into practical governance and risk management processes.

Skills to develop:

- Classify AI systems according to the risk categories of the EU AI Act.
- Implement ISO/IEC 42001 and NIST AI RMF frameworks within the organisation.
- Conduct AI risk assessments and document technical compliance requirements

Methodology

Learning-by-doing approach; initial self-diagnosis; micro-demonstrations; guided prompting practice; finance-context exercises and case studies; creation of a mini use case per participant; peer-to-peer sharing and best practice session for safe daily integration.

Target audience

Compliance Officers, Risk Managers, Data Protection Officers (DPOs), IT Directors and Legal Counsels.

Duration

7 hours

Sessions can take place over 1 full day or 2 half-days

OUTLINE

SPECIFIC OBJECTIVES

- Understand the obligations under the European AI Act and GDPR applied to AI systems.
- Implement the ISO/IEC 42001 (AI Management System) and NIST AI RMF guidelines.
- Identify and mitigate AI-specific risks, including biases, lack of transparency and data privacy issues.
- Establish human oversight and design the technical documentation required by law.
- Clarify the roles of DPOs, CISOs and Compliance Officers in the AI lifecycle.

ETAPA 2

TRAINING

ARTIFICIAL INTELLIGENCE FOR IT SPECIALISTS

Integrate Artificial Intelligence into your software development and IT processes

AI GOVERNANCE CHALLENGES AND REGULATIONS

- Specific AI risks: bias, transparency, explainability and data sovereignty.
- EU AI Act: Risk classification (Unacceptable, High Risk, Limited, Minimal) and compliance obligations.
- AI and GDPR: Principles, Data Protection Impact Assessment (DPIA) and automated decisions (Article 22).

STANDARDS AND GOVERNANCE FRAMEWORKS

- ISO/IEC 42001: Operational management and organisational maturity for AI.
- NIST AI RMF: Mapping, measuring and governing AI risks.
- Complementarity between ISO 27001 (Security) and ISO 42001 (AI).

IMPLEMENTATION, AUDITING AND PORTFOLIO MANAGEMENT

- Compliance for internal Generative AI: chatbot deployment and vendor risk management.
- Portfolio management: risk-ranking and inventorying internal AI projects.
- Simplified audit checklists and setting up AI ethics committees.
- Practical exercise: Conducting a compliance audit simulation for an internal AI tool and drafting a risk mitigation plan.

Scenario-based learning; role plays; practical exercises on leadership skills

Real-world examples, case studies and illustrative videos

Concept framing and clarification

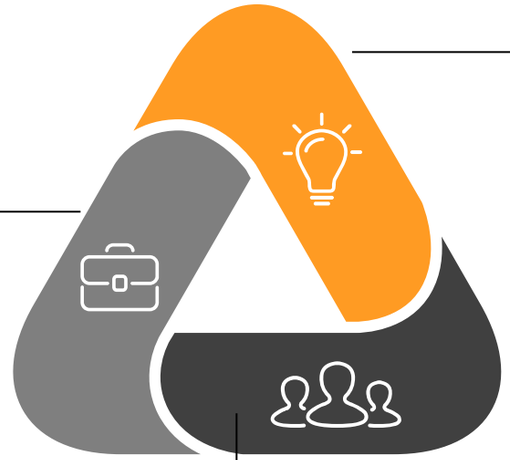

Feedback; synthesis moments; debriefs

ETAPA 2

TRAINING

AI FOR CONTENT CREATION IN MARKETING

Produce high-quality copywriting, graphics and audio campaigns using Generative AI.

Skills to develop:

- Master advanced prompt engineering for copywriting, messaging and campaign brainstorming.
- Generate professional marketing assets, images and graphics using AI generation tools.
- Optimise marketing workflows by automating content planning and scheduling

Methodology

Learning-by-doing approach; initial self-diagnosis; micro-demonstrations; guided prompting practice; finance-context exercises and case studies; creation of a mini use case per participant; peer-to-peer sharing and best practice session for safe daily integration.

Target audience

Marketing Professionals, Copywriters, Content Creators, Social Media Managers and Brand Designers

Duration

7 hours

Sessions can take place over 1 full day or 2 half-days

SPECIFIC OBJECTIVES

- Understand the fundamentals of Generative AI and its direct applications in marketing.
- Apply advanced copywriting formulas (AIDA, PAS) using prompt engineering.
- Design visual marketing materials and social media assets with text-to-image tools.
- Explore AI audio, video and synthetic voice generators for multimedia content.
- Manage copyright, intellectual property and data safety guidelines when using AI.

ETAPA 2

TRAINING

AI FOR CONTENT CREATION IN MARKETING

Produce high-quality copywriting, graphics and audio campaigns using Generative AI.

GENERATIVE AI IN MARKETING & COPYWRITING

- Introduction to Generative AI models (ChatGPT, Claude) for marketing workflows.
- Prompt engineering for copywriting: emails, blog posts, ad copies and SEO optimisation.
- AI-assisted brainstorming: campaign concepts, slogans and editorial calendars.

VISUAL & MULTIMEDIA CONTENT GENERATION

- Text-to-image tools: Midjourney, DALL-E and Canva AI for marketing graphics.
- Introduction to AI video generators and synthetic voiceovers.
- Maintaining brand consistency and visual guidelines in AI outputs.

WORKFLOW AUTOMATION & ETHICAL BEST PRACTICES

- Integrating AI into daily marketing workflows and social media scheduling.
- Intellectual property, copyrights and ethical use of AI-generated content.
- Data privacy and secure handling of brand and customer information.
- Practical exercise: Designing a complete digital marketing campaign: writing copy, generating visual assets and creating a social media calendar using AI.

Scenario-based learning; role plays; practical exercises on leadership skills

Real-world examples, case studies and illustrative videos

Concept framing and clarification

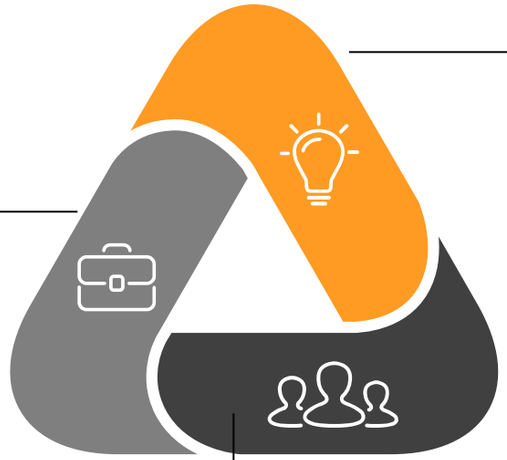

Feedback; synthesis moments; debriefs

ETAPA 2

TRAINING

SECURITY OF AI IN PRODUCTION

Protect Artificial Intelligence systems, APIs and data pipelines against modern security threats.

Skills to develop:

- Map AI threat vectors and vulnerabilities using the MITRE ATLAS framework.
- Detect and mitigate adversarial attacks, including prompt injections and data poisoning.
- Implement secure monitoring and incident response playbooks for AI models in production

Methodology

Learning-by-doing approach; initial self-diagnosis; micro-demonstrations; guided prompting practice; finance-context exercises and case studies; creation of a mini use case per participant; peer-to-peer sharing and best practice session for safe daily integration.

Target audience

Information Security Specialists, Cybersecurity Analysts, DevSecOps Engineers and CISO Team Members

Duration

7 hours

Sessions can take place over 1 full day or 2 half-days

OUTLINE

SPECIFIC OBJECTIVES

- Identify security risks across the AI lifecycle using the MITRE ATLAS framework.
- Detect and prevent adversarial attacks (evasion, extraction, model inversion).
- Secure training and inference pipelines against data poisoning and leakage.
- Setup continuous security monitoring (SOC) based on AI Indicators of Compromise (IoCs).
- Design secure rollback and incident response playbooks under EU AI Act compliance.

ETAPA 2

TRAINING

SECURITY OF AI IN PRODUCTION

Protect Artificial Intelligence systems, APIs and data pipelines against modern security threats.

SECTION 1: THREAT MODELLING & THE MITRE ATLAS FRAMEWORK

- AI attack vectors: pipeline access, model extraction and data reconnaissance.
- Introduction to the MITRE ATLAS framework and mapping AI vulnerabilities.
- Infrastructure security: dev/train/prod environment isolation and encryption in transit/rest.

SECTION 2: ADVERSARIAL ATTACKS & TECHNICAL MITIGATION

- Evasion attacks: input manipulation at inference time (prompt injections).
- Integrity attacks: data poisoning and database manipulation.
- Confidentiality threats: model extraction and membership inference (data leakage).
- Implementing defensive distillation and robust training frameworks.

SECTION 3: AI SECURITY MONITORING & INCIDENT RESPONSE

- Continuous security monitoring: tracking API anomalies and anomalous request patterns.
- SOC integration: alert triggers based on AI-specific Indicators of Compromise (IoCs).
- Incident response playbooks: model containment, rollback and safe re-training validation.
- Practical exercise: Conducting a threat modelling session on a production LLM API and configuring defensive guardrails to block prompt injection attacks.

Upon completion of the training, participants will be tasked with developing and executing an individual action plan designed to challenge them to adopt new behaviors, strategies, and habits aligned with the program's core themes.

Following the instructional phase, supplementary initiatives may be established to drive continuous improvement and reinforce these newly acquired behaviors.

Skolae FORMAÇÃO

STAGE 2

TRAINING

DRIVING CHANGE

To ensure the change process is effectively sustained and embedded, we recommend targeted **post-training** initiatives tailored to specific and individualized development needs, including:

Training Lab (1/2 Day Consolidation Session)

Scheduled two to three months post-training, this session establishes a collaborative forum for reflection and experience-sharing regarding the deployment of tools and techniques acquired during the program.

The objective is to engage participants in a critical evaluation of achieved milestones, tangible outcomes, and the baseline anchoring of best practices

The Training Lab facilitates individual behavioral change by reviewing the core curriculum, conducting practical exercises, resolving queries, and refining skills through role-plays.

This session is designed to run for 3.5 hours.

STAGE 3

EVALUATION

SKOLAE FORMAÇÃO assesses training effectiveness using the **Kirkpatrick Model** at the following levels:

LEVEL 1

Delegate reaction and satisfaction:

- Analysis of end-of-programme satisfaction survey results
- In-room reflection: delegates respond to the prompt *"For me, this programme was..."*

LEVEL 2

Learning assessment:

- Assessment of knowledge and skill acquisition throughout the programme
- Through: facilitator observation of in-room activities and exercises / completion of a learning assessment questionnaire

At project close, SKOLAE FORMAÇÃO:

- Produces a comprehensive programme report covering data analysis, delegate feedback and the facilitator's overall assessment, including observations, recommendations and suggestions for complementary development activity
- Holds a formal project debrief to present structured feedback on the work delivered

SKILL YOUR FUTURE

WE ARE THE PORTUGUESE SISTER COMPANY OF THE SKOLAE GROUP

Present in Portugal since 1998, SKOLAE is a European multi-specialist company focused on the development of skills and learning solutions..

ACELERAMOS PROCESSOS DE MUDANÇA

FORMAL LEARNING

WE ACCELERATE CHANGE PROCESSES

To grow, professionals must be able to explore, experiment and practice, this is the approach behind IFE by SKOLAE training programmes

.With an action-oriented training model built around active learning methods, we design hands-on programmes based on the learning by doing approach.

These include practical exercises, case studies, simulations, individual reflection moments, group dynamics, and the integration of learning games that encourage peer exchange and strengthen the learning experience.

INFORMAL LEARNING

WE ENCOURAGE SELF-DIRECTED LEARNING

We design immersive learning expeditions aimed at inspiring action and triggering changes in both behaviour and mindset.

These outdoor programmes promote individual and collective reflection, helping teams identify practical responses to business challenges and translate them into clear action plans.

We also develop and facilitate learning communities, and produce multi-format, multi-platform content such as videos, podcasts, eBooks, white papers, infographics, newsletters, magazines, books, blogs and websites.

PEER-TO-PEER LEARNING

WE STRENGTHEN PEER-TO-PEER LEARNING

We design programmes that help demystify key concepts, encourage the sharing of ideas and practical experiences, and create space to present and debate trends that impact business development.

Examples:

- include:Conversations with a subject-matter expertPeer-to-peer case study sharingRoundtable discussions and debates

OUR BELIEFS

THE CLIENT AT THE CENTRE

Our commitment is to address our clients' strategic challenges.

DIGITAL AS AN ENABLER

Digital is a means to increase agility and flexibility while encouraging openness. Learning will be delivered through multi-format and multi-platform solutions.

INNOVATION AS A LEVER

Developing new skills and ways of working enables innovation, accelerates change processes, and helps organisations prepare for the future.

STRENGTHENING COLLABORATION

Learning will increasingly be collaborative, reinforcing peer-to-peer exchange both in person and through communities.

IN-PERSON LEARNING AS A CORE PILLAR

Face-to-face learning will continue to play a strong social role and remain essential for improving performance.
